

**I faced Some Limitiations of the AI applications while trying to generate the images which as follows :**

- 1) All AI tools can't generate images because some of them are **only text based**. So, In that sense there are limited AI tools for me to start with.**
- 2) Some AI tool allows to generate images but most of them are paid meaning I have **to pay an amount to get their services** . As a Student , I couldn't afford to purchase those paid services. So, I relied on free tools like ChatGPT etc.**
- 3) Though, **ChatGPT(DALL-E)** generated some incredible images according to the prompt , it has limited capacity of creating images for an user. An User can create maximum **3 to 4 images** in a turn**

and had to wait **12-24 hours** to get the chance to create other images. So, I had to be careful while writing prompts . As, I had limited turns to create images , I tried to make those prompts as described as possible .
